Similar softwareQ: Prove $\sum_{k=1}^n \left(\frac{1}{k} - \frac{1}{n+k} \right) = \log n - \log \log n + O\left(\frac{1}{\log n}\right)$ I'm trying to prove the following problem: How do I prove the following: Thanks for all the help.
A: Write $\frac{1}{k} - \frac{1}{n+k}$ as $\frac{1}{n+k-k} - \frac{1}{k}$, then sum the two terms. You will get an expression of the form $\sum_{k=1}^n k^{-2} - \sum_{k=1}^n k^{-1} = \sum_{k=1}^n k^{-2} - \frac{1}{n} \sum_{k=1}^n k^{-1}$. Then it is not hard to evaluate this sum. Q: How do I get a Scala's map to retain the order of the first argument list passed to map? The following code `import scala.collection.JavaConversions._ val A = Map("k" -> 1) val B = Map("l" -> 1) val C = Map("i" -> 1) println(B ++ A ++ C)` prints the following: `Map(l -> 1, i -> 1, k -> 1)` This doesn't make any sense to me, why does it do this? It should print: `Map(l -> 1, i -> 1, k -> 1)` A: The default ordering of the keys of the returned map is consistent with the order of the order of the map being created. In the case of the code you pasted it does not make much sense to create three maps where k, l and i are the keys of each. Metta World Peace, 21, Free Agent Decision: Resign World Peace, the New York Knicks' former forward and a free agent, is a Laker at heart. If it were up to him, he'd like to stay with the Lakers. The former all-star and future Hall of Famer wants to stay in Los Angeles. The Lakers, however, will not find it easy to sign him. The Lakers currently have a cap space of \$21.9 million. In order for the team to bring in World Peace, it will need to make some moves to clear cap space. The Lakers have a solid young core that includes Brandon Ingram, Lonzo Ball, and Kyle Kuzma.
